CONTENTS

Volume 110 · Number 1 · 1994

RESEARCH ARTICLES

Fanelli, G., Piraino, S., Belmonte, G., Geraci, S., Boero, F.
Human predation along Apulian rocky coasts (SE Italy): desertification caused by *Lithophaga lithophaga* (Mollusca) fisheries 1–8

Benedetti-Cecchi, L., Cinelli, F.
Recovery of patches in an assemblage of geniculate coralline algae: variability at different successional stages 9–18

Miller, K. J.
Morphological variation in the coral genus *Platygyra*: environmental influences and taxonomic implications 19–28

Le Tissier, M. D'A. A., Clayton, B., Brown, B. E., Davis, P. S.
Skeletal correlates of coral density banding and an evaluation of radiography as used in sclerochronology 29–44

Wahl, M., Jensen, P. R., Fenical, W.
Chemical control of bacterial epibiosis on ascidians 45–57

Durako, M. J.
Seagrass die-off in Florida Bay (USA): changes in shoot demographic characteristics and population dynamics in *Thalassia testudinum* 59–66

Nissling, A., Kryvi, H., Vallin, L.
Variation in egg buoyancy of Baltic cod *Gadus morhua* and its implications for egg survival in prevailing conditions in the Baltic Sea 67–74

Head, E. J. H., Harris, L. R.
Feeding selectivity by copepods grazing on natural mixtures of phytoplankton determined by HPLC analysis of pigments 75–83

Chen, J.-C., Chen, C.-T., Cheng, S.-Y.
Nitrogen excretion and changes of hemocyanin, protein and free amino acid levels in the hemolymph of *Penaeus monodon* exposed to different concentrations of ambient ammonia-N at different salinity levels 85–94

Ledyard, K. M., Dacey, J. W. H.
Dimethylsulfide production from dimethylsulfoniopropionate by a marine bacterium 95–103

Volume 110 · Numbers 2 and 3 · 1994

RESEARCH ARTICLES

Rowe, P. M., Epifanio, C. E.
Tidal stream transport of weakfish larvae in Delaware Bay, USA 105–114

Rowe, P. M., Epifanio, C. E.
Flux and transport of larval weakfish in Delaware Bay, USA 115–120

Milicich, M. J., Doherty, P. J.
Larval supply of coral reef fish populations: magnitude and synchrony of replenishment to Lizard Island, Great Barrier Reef 121–134

Milicich, M. J.
Dynamic coupling of reef fish replenishment and oceanographic processes 135–144

Arrhenius, F., Hansson, S.
In situ food consumption by young-of-the-year Baltic Sea herring *Clupea harengus*: a test of predictions from a bioenergetics model 145–149

Goshima, S., Fujiwara, H.
Distribution and abundance of cultured scallop *Patinopecten yessoensis* in extensive sea beds as assessed by underwater camera 151–158

Santos, P. J. P.
Population dynamics and production of *Scolelepis gaucha* (Polychaeta: Spionidae) on the sandy beaches of Southern Brazil 159–165

Sun, B., Fleeger, J. W.
Field experiments on the colonization of meiofauna into sediment depressions 167–175

Martin-Smith, K. M.
Short-term dynamics of tropical macroalgal epifauna: patterns and processes in recolonisation of *Sargassum fissifolium* 177–185

Westermeier, R., Müller, D. G., Gómez, I., Rivera, P., Wenzel, H.
Population biology of *Durvillaea antarctica* and *Lessonia nigrescens* (Phaeophyta) on the rocky shores of southern Chile 187–194

Andersson, S., Kautsky, L., Kalvas, A.
Circadian and lunar gamete release in *Fucus vesiculosus* in the atidal Baltic Sea 195–201

Kübler, J. E., Raven, J. A.
Consequences of light limitation for carbon acquisition in three rhodophytes 203–209

Vidal, M.
Phosphate dynamics tied to sediment disturbances in Alfacs Bay (NW Mediterranean) 211–221

Nedwell, D. B., Blackburn, T. H., Wiebe, W. J.
Dynamic nature of the turnover of organic carbon, nitrogen and sulphur in the sediments of a Jamaican mangrove forest 223–231

Blackburn, T. H., Nedwell, D. B., Wiebe, W. J.
Active mineral cycling in a Jamaican seagrass sediment 233–239

Moran, M. A., Hodson, R. E.
Support of bacterioplankton production by dissolved humic substances from three marine environments 241–247

Sampou, P., Kemp, W. M.
Factors regulating plankton community respiration in Chesapeake Bay 249–258

Hutchins, D. A., Bruland, K. W.
Grazer-mediated regeneration and assimilation of Fe, Zn and Mn from planktonic prey 259–269

Lee, B.-G., Fisher, N. S.
Effects of sinking and zooplankton grazing on the release of elements from planktonic debris 271–281

Vincent, W. F., Bertrand, N., Frenette, J.-J.
Photoadaptation to intermittent light across the St. Lawrence Estuary freshwater-saltwater transition zone 283–292

Stoecker, D. K., Gifford, D. J., Putt, M.
Preservation of marine planktonic ciliates: losses and cell shrinkage during fixation 293–299

COMBINED AUTHOR AND TITLE INDEX
Volumes 101–110 (1993–1994) 301–313

MARINE ECOLOGY PROGRESS SERIES

HISTORY: Marine Ecology Progress Series (MEPS) was established in response to requests from numerous marine ecologists from all over the world. When founded, MEPS was based on 'Marine Ecology' – the first comprehensive, integrated treatise on life in oceans and coastal waters – conceived, organized and edited by Professor Otto Kinne, and published by John Wiley & Sons.

AIM: MEPS serves as a world-wide forum for all aspects of marine ecology, fundamental and applied. The journal covers: microbiology, botany, zoology, ecosystem research, biological oceanography, ecological aspects of fisheries and aquaculture, pollution, environmental protection, conservation, resource management.
Ecological research has become of paramount importance for man's future. The information presented here should, therefore, encourage critical application of ecological knowledge for the benefit of mankind and, in fact, of life on earth. Marine Ecology Progress Series has received recognition as the leader in its field. The journal strives for

- complete coverage of the field of marine ecology
- the highest possible quality of scientific contributions
- quick publication
- a high technical standard of presentation.

SCOPE: MEPS is international and interdisciplinary. It presents rigorously refereed and carefully selected research articles, reviews and notes, as well as comments, concerned with:

Environmental Factors: Tolerances and responses of marine organisms (microorganisms, autotrophic plants, and animals) to variations in abiotic and biotic components of their environment; radioecology.

Physiological Mechanisms: Synthesis and transversion of organic material (mechanisms of auto- and heterotrophy); thermo-, ion-, osmo- and volume-regulation; stress resistance; non-genetic and genetic adaptation; population genetics; orientation in space and time; migrations; behavior; molecular basis of ecological processes.

Cultivation: Maintenance and rearing of, as well as experimentation with, marine organisms under environmental and nutritional conditions which are, to a considerable degree, controlled; analysis of the physiological and ecological potential of individuals, populations and species; determination of nutritional requirements; ecological aspects of aquaculture; water-quality management; culture technology.

Dynamics: Production, transformation, and decomposition of organic matter; flow patterns of energy and matter as these pass through organisms, populations and ecosystems; biodiversity; variability of ecosystem components; trophic interrelations; population dynamics; plankton ecology; benthos ecology; estuarine and coastal ecology; wadden-sea ecology; coral reef ecology; deep-sea ecology; open-ocean ecology; polar ecology; theoretical ecology; ecological methodology; ecological modelling and computer simulation.

Ocean Management: Human-caused impacts: their role as modifiers and deformers of living systems, their biological consequences and their management and control; inventory of living resources in coastal areas, estuaries and open oceans; ecological aspects of fisheries; pollution of marine areas and organisms; protection of life in the seas; management of populations, species and ecosystems; management of coastal zones and sea areas; biotechnology.
